

Onboarding Redesign, Cisco Panoptica

Source: /#gallery

Year: 2024

I redesigned Panoptica's onboarding experience, contributing to a 50% reduction in onboarding abandonment and helping more new users complete the full setup flow.

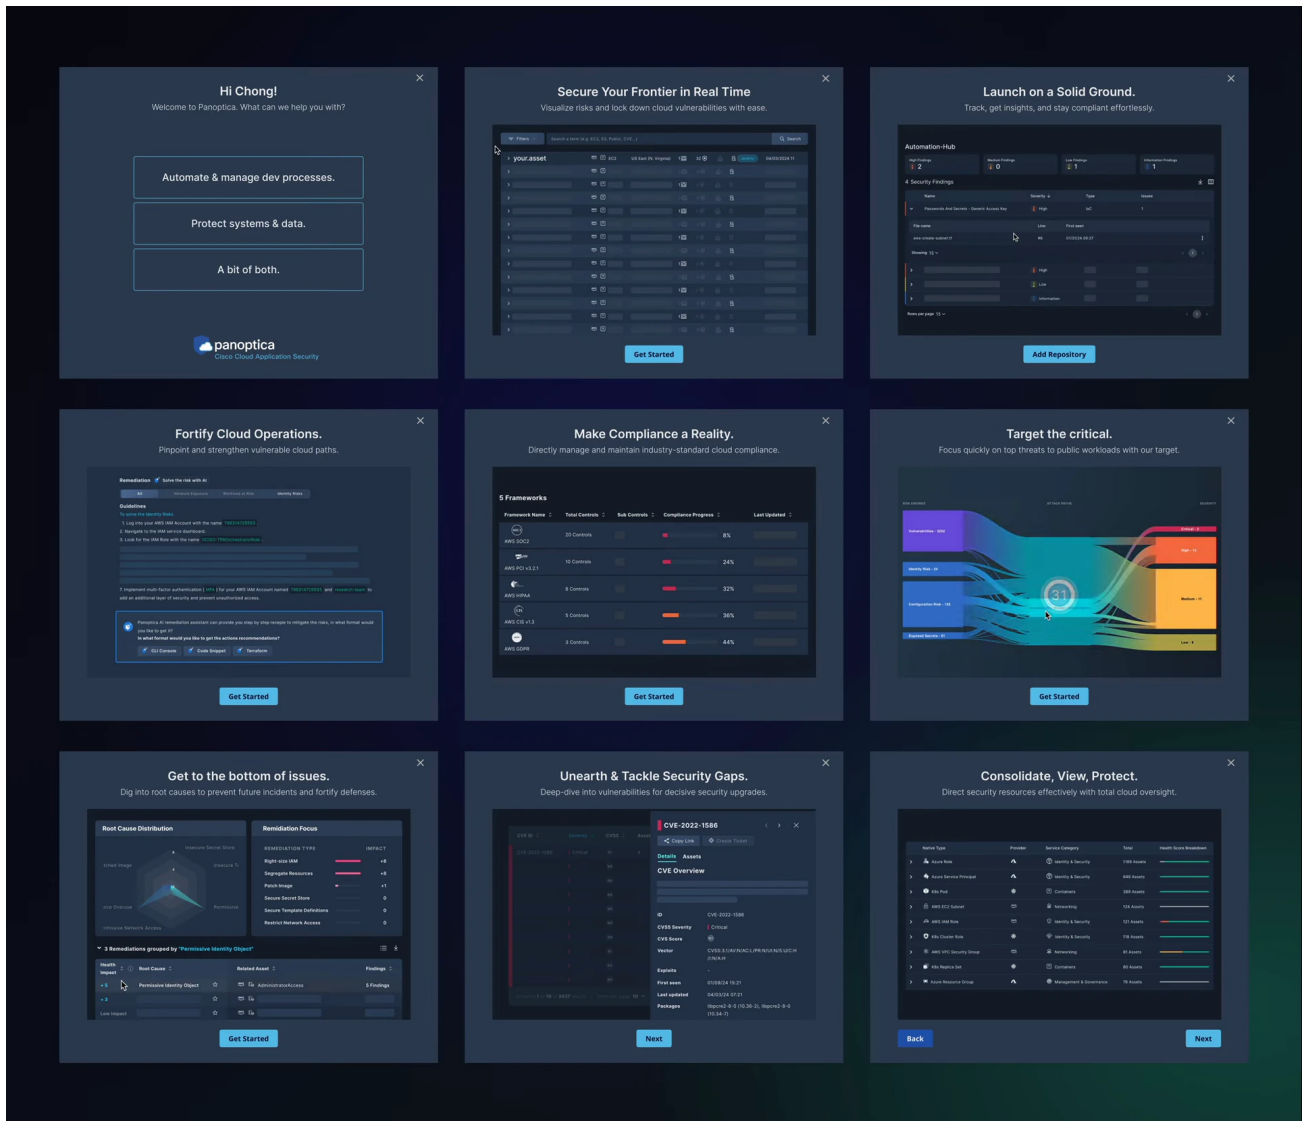

I evolved the experience from guiding users toward the next action to teaching them, through visuals, animations, concrete examples, and walkthroughs, what Panoptica could do and what they would gain from completing setup.

As a non-engineer designing for DevOps, SecOps, and technical managers, I had to understand unfamiliar technical concepts well enough to explain them clearly without diluting their meaning.

I defined the principles for an outcome-driven educational onboarding model that introduced Panoptica's different capabilities as users moved through setup. I also used AI as a learning and translation aid to test analogies, build empathy for technical users, and refine copy that could work for engineers and non-engineers alike.
