

Trebuchet Trials, Microsoft Hacking STEM

Source: /#gallery

Year: 2019

Trebuchet trials were part of an MHCI+D and Microsoft Hacking STEM collaboration, for which my team and I received the 'Best Design Implementation' award.

It was designed as an interactive learning kit priced under \$15. Given the high hardware costs, my contribution was to design a trebuchet that could be constructed by 10-year-olds using paper, pencils, and tape.

Sounds simple when seen from a distance, but it's practically impossible when you get into the details, so this one still holds a special place in my memory.

Step 2:

Setup the physical computing apparatus.
