

02

Explicit Uncertainty:
AI should clearly express uncertainty, confidence intervals, or knowledge gaps.

Inferential Uncertainty:
Let uncertainty be sensed through hedging, conflicting evidence, or vagueness — as humans often do when interpreting others.

CEO of a mid-sized clothing brand:

We're a mid-size DTC clothing startup — should we explore verticals like home goods or beauty this year?

AI System:

I'm moderately confident about this...

Available industry data supports beauty as a stronger adjacency, based on DTC brand transitions and margin trends.

However, outcome variance is high — especially in supply chain and regulatory complexity. Recommend time-boxed pilots to validate consumer alignment before deeper investment.

CEO of a mid-sized clothing brand:

We're a mid-size DTC clothing startup — should we explore verticals like home goods or beauty this year?

AI System:

Some DTC brands have successfully expanded into beauty, citing strong audience overlap and favorable margins.

Others have struggled with differentiation and operational complexity. Home goods tends to grow slower, but can deepen brand presence across channels.

Expansion paths remain context-sensitive.
